- Soopun Ridwaan Bin Farook

➤ DEFINING AI

What is AI?

Artificial Intelligence (AI) is a machine or application which carries out a task that requires some degree of Intelligence when carried out by a human being

Types of AI

- Narrow AI
- General AI
- Super AI

SLMs V/S LLMs

Small Language Models	Large Language Models
Hundreds of thousands to a few billion parameters	Billions to trillions of parameters
Faster processing with lower latency	Excel at complex, open-ended tasks but can have higher latency.
Greater precision and reliability within their specific domain	Higher accuracy in general tasks

➤ APPLICATIONS OF AI

AI in business intelligence

Decision-making, data collection, data analysis.

AI in healthcare

Treatment for diseases and their diagnosis.

AI in the education sector

Types of learning, student engagement and automation in tasks.

AI in the manufacturing sector

Efficiency, productivity and quality.

Additional AI Applications

Where is AI being implemented?

➤ CHALLENGES OF ARTIFICIAL INTELLIGENCE

Bias and Fairness:

“Can we remove bias from AI completely?”

Job Market:

“Will AI take more jobs than it creates?”

Privacy and Data Security:

“Who owns our data in the age of AI?”

Dependence and Misuse:

“Are we too dependent on AI?”

Energy Consumption:

“Should AI progress be more balanced with green technology?”

➤ QUANTUM AI : THE FUTURE OF INTELLIGENCE

Quantum AI = Quantum computing + Artificial Intelligence

Quantum computers use qubits

Unlike classical computers which use bits that are either 0 or 1, a qubit can be 0,1 or both at the same time, thanks to a physical property called SUPERPOSITION. This allows information to be processed in new powerful ways.

Faster AI training & POWERFUL OPTIMISATION

Applications: Medicine, Finance, Cybersecurity, Climate

EARLY STAGE ---→ NEXT TECH REVOLUTION

An illustration with a dark blue background featuring glowing circuit lines and a large teal square with the letters 'AI' at the top. Below the 'AI' box, a woman in a red shirt is painting on an easel. In the center, a woman in a yellow vest plays an acoustic guitar. To the left, a man in a green shirt sits at a desk with a laptop. At the bottom, a woman in a red shirt plays a violin, a woman in a white vest speaks into a microphone, and a man in a white shirt and yellow hard hat holds a lightbulb and a blueprint. Stylized teal leaves are scattered throughout the scene.

“AI is about amplifying
human potential, not
replacing it” — Satya
Nadella

Thank you!
