EXHIBIT 6

IT WAS PRETTY OBVIOUS TO THE ONLOOKERS
HOW *THIS* WAS GOING TO END.

Danger!

EXHIBIT 7

THIS IS WHAT OUR TEAM DREAMS OF

Explain how your team was formed, how roles were defined, and decisions taken.

Team Building:

As soon as our online lecture ended, I sent a message to my friend (Yash) asking if he already had a team for the presentation for next Monday. By then, he did not — so we paired up. Then, he also suggested adding our other friend (Seren) from RCPL. We were now a team of 3 with only 1 team member missing. Then, what crossed our minds was to include Jatin — also a friend from RCPL. Unfortunately, it turned out that he was already in a group. After that, we asked each other if they had someone else in mind but sadly not. I then thought of a guy whom I had met in the library. Unfortunately, he already had 2 members in his team. Merging would exceed the maximum size of the group (4 members), hence impossible. Later, I contacted a guy whom I met outside the computer laboratory. We always sit near to each other during lab sessions. We came to know each other like this. We were talking about our siblings who would be graduating from the Faculty of Science the following day. I went to look up Ridwaan's WhatsApp number and I re-introduced myself to him once again because we did not know each other's surname nor phone number. I asked him if he would like to join our group because it lacked one team member. So, after thinking about around 3 minutes — he accepted.

How Roles were defined:

Virtual team building activity:

For our first presentation — the virtual team building activity — we had decided on the theme of AI. Then, what immediately came to our mind was that it was a very broad field. During our brainstorming session, each one of us suggested which part of AI they wanted to work on. Personally, I wanted to do the quantum part of AI, but a friend wasn't willing to go first during the presentation. So, we swapped roles. Eventually, we decided to prepare a slide each and our content for talking. We also had to nominate a group leader. This was a fun activity. We did a poll. Each one of us voted for the friend voting for the other. Eventually, I was nominated as the team leader with the motto: 'Saki Ayush dire sa même 😄'

Yash and Ayush contributed mostly to the designs and styles of the PowerPoint presentation.

Delegation of tasks/theme to each one (quotes, style, frames, borders)

Ayush: Introduction, defining AI, conclusion, submission of the slides, and I monitored the amount of time that we were taking to present our ideas during rehearsals. When we were exceeding — we had to adjust our contents to make the time limit. I had added animations and transitions, but it was not only my work. Each team member was present and gave their suggestions.

Seren - Applications of AI, monitored amount of time taken to present during rehearsal.

Yash - Ethical side of AI, template

Ridwaan - Future of AI (quantum)

Scavenger Hunt:

Ayush and Seren: Editing of the background of the car (Mercedes) and changing its plate number.

Seren: Tweaks to the alignment, texts, colours, borders, description of photos for nature and, idea to add Patrick.

Ayush: Editing of the sign board (Do not touch), plate number, drawing for innocence of a child, adding the profile pictures and submitting the projects to Google Classroom. Hosting the Google Meet sessions. Idea to use Gandhi as peace for our dream rather than materialistic.

Ridwaan: Idea to include Scooby Doo and writing quotes about Gandhi.

Yash: Idea to add SpongeBob SquarePants, borders, background, and templates.

Decision Making:

Virtual Team Building Activity:

- Assigning our team's name - DeepSeekers
- We chose AI as our topic.
- Electing Ayush as the Group leader
- We decided to have Google Meet at 8pm tonight to complete our assignment
- Self-imposed deadline to complete the project, polishing up, doing rehearsals using google meet and working on a shared PowerPoint document together
- Selecting different backgrounds for different slides

Scavenger hunt:

- We finally chose Sir Issac Newton's picture at the CBBR at UoM for our Mascot after several different proposals.
- We decided to include all four team members in only a few pictures with the remaining ones with 3 people (alternating who will be in or not).
- Yash got a template for our background which we tailored for our assignment.
- We decided to add images alternating their sides on the different slides.
- Ultimately, we chose a black Mercedes Benz with its plate number customised to our team's name
- Nature picture taken between the FSSH building and CBBR.
- Picture of happiness taken at tables under a tree with their benches.

Assess your team and your individual performance

Team Performance:

Ayush:

Sometimes, we were only two working on the project in a day. However, most of the time, we are all working together. Everyone showed up for the final presentation. No one stepped down. There was very good coordination by Yash when presenting the slides. He was meticulous to who was talking on which topic. I believe that there was a smooth transition from each speaker to the next while presenting as well.

Improvements: Everyone to work on the same document at the same time. Time management skills.

Makhun:

I believe our team has its strengths and weaknesses. Indeed, coming up with bright and innovative ideas in the Scavenger Hunt was not a problem, and we manage disagreements respectfully, resolving them quickly through open discussion. I also must admit our collaboration is near perfect, with constructive criticism from Ridwaan and Seren as well as active participation especially from Ayush throughout our assignments. But what is worth pointing out is that we have unlocked the secret formula for time management. Hence, our meetings are optimized, leading to everyone being present almost all the time.

However, as any team, we also encounter challenges that affect our performance. Sometimes we might be overworking, leaving us drained from exhaustingly long meetings, when trying to complete too much in a single session. Also, not all members have the same setup, which causes difficulties when working simultaneously on Word or PowerPoint. Finally, we sometimes prioritised design elements over simplicity, which led to extra workload.

Yet, our teamwork remains resilient, making us the 'dream team', one I value highly and would not trade for anything (except money 😊).

Seren:

The first presentation set off with the team leader who is none other than Ayush Ramrooch's inquisitive introduction on the different topics and the team members, which was a true act of leadership and management from his part. The team then spoke with dexterity and clarity on the assigned topics which already set the mood and gave us an insight into how to continue forward with the forthcoming slides.

Similarly for the Scavenger Hunt, our team leader postulated the ideas of where and how we can take pictures, and we helped him further by adding our own opinions and nuances pertaining to the different titles and circumstances. Capturing photos, edits, voicing views and building the projects, were all done as a group and we all displayed proper sense of our duties and responsibilities.

Ridwaan:

My team members were very supportive and friendly. The spirit of group work was there. Work has been shared in a way that no one felt that they are getting more burdens than the others. There has been flexibility in terms of the time we worked together and understanding that our team members have religious commitment on specific days or dates.

Individual Performance:

Ayush:

I was present at every meeting that we had. I submitted the documents on time. I sought clarifications for the project directly from the lecturer. I sent the Google Meet links before the start or more-or-less on time and even before the start of some meetings. I informed team members of them following agreement from all. It may have happened that I didn't start the meeting at exactly 8 pm. Sometimes, I did not have dinner prior to the meeting. I waited until it was over to have dinner. I gave flexibility to members who were tired, sick, or had other commitments. I did not want the project to be done by only 1 person or only a few. I wanted the point of view of everyone for brighter ideas and to be on the same wavelength. When I did not know what to do — I asked for ideas, solutions and opinions. It does not mean that when I am the group leader that I know everything. Personally, I feel that I did not delegate the tasks very well to the different team members for the scavenger hunt part.

Makhun:

For the Virtual Team Building, I collaborated with Ayush to create our team by finding members. Then, after being assigned my work, I prepared my slide on Ethics of AI, using a PowerPoint - a software I never had used previously. I also designed the template and picture borders for the Scavenger Hunt on the same software. I can confidently say that I have gotten more experienced and skilled using it! During online meetings, I actively participated in organizing and implementing ideas. I also listened to my teammates attentively about their opinions before implementing any of my ideas.

Nonetheless, I am still human, and I believe I have certain areas to improve. Task management is the most crucial, as I need to remain fully focused on the group assignment. Thus, I must manage all my personal tasks first (eating, revising, other assignments). Lastly, I feel like I need to research more on my topic as well as doing rehearsals, which can build up my confidence and strengthen my credibility.

Seren:

Now, I presented on my assigned topic (Application of AI) pretty much flawlessly with the only constraints being limited amount of information due to allocated talking time per member. Additionally, I felt that I could have provided more information and specifics if I did more in-depth research, thus showing that I could improve more on management and research work.

Ridwaan:

For the oral presentation, I was assigned to work on Quantum AI, and I've been able to retrieve the most useful information to explain in my presentation. I believe, for the first time, I've been able to do a good presentation, but as we say, practice makes perfect!

As for the Scavenger hunt, I had been assigned to work on quotes as writing quotes and reminders on social media is something I'm fond of. So, I helped my team with that. I've also given many ideas on how to proceed with our assignment.

Explain different conflicts that arose and how they were dealt with.

We all know the great saying: 'No great achiever ever succeeded without hard work and failures' - laying emphasis on the fact that even though our activities seemed easy, we still had our flaws and conflicts, yet we overcame them.

Conflicts & Resolutions:

➤ **Assigning Roles:**

Explanation:

When assigning roles such as electing our team leader or choosing who will present first, conflicts often arose during the preparation of the assignment. We were unsure about which role suited each of us best. For example, Ayush wanted to present the Quantum AI topic (the last slide), but Ridwaan felt more confident going last. Furthermore, we could not decide on who will be our team leader.

Resolution:

With clearer role definitions and better communication, we eventually clarified each person's strength and interests, then delegating the right task for everyone. We opted for Ridwaan to present the last slide as Ayush's forte is his introduction. Eventually, upon witnessing the team effort of Ayush, we made him our leader!

➤ **Conflicting Ideas**

Explanation:

Indubitably, our team came up with a lot of ideas, but the diversity of ideas entertained some conflicts especially in the scavenger hunt [Pictures, mascot and scenarios]. For example, for the caption '*Amazing! This is the true meaning of happiness*', Ridwaan was suggesting going and taking a picture of us in the UOM cafeteria or at Baadshah and show that happiness is in eating delicious foods. But Ayush suggested another idea. Moreover, for the caption '*It was pretty obvious to the onlookers how this was going to end*', Ayush wanted to portray stealing a book from the library, but Yash proposed that we instead act as if we are opening a tap of an exploding gas. We also struggled to find a mascot. We had several ideas ranging from Mahatma Gandhi's statue, icon of DeepSeek(AI) on a monitor, a mouse or Sir Issac Newton's portrait.

Resolution:

However, with an open discussion on the ideas and proper brainstorming, we meticulously chose which ideas were the best. As we listened to all opinions, we compromised; some ideas had to be scrapped, or photos retaken. We went for scenarios which were easy to perform but still relevant. This led to us capturing a beautiful picture together, sitting and laughing together for the caption '*Amazing! This is the true meaning of happiness*'.

➤ Design and Editing Preferences

Explanation:

Similarly, each one of us has their own preferences concerning the design of the projects, such as editing layouts, color schemes and presentation styles. While Seren and Yash preferred a simple and professional look, Ridwaan and Ayush desired a more creative and visually striking design. This was clearly noticeable when each of us created a slide for Virtual Team Building presentation. Consequently, for the Scavenger Hunt, choosing picture borders and text font would become a Herculean feat as a mutual agreement could not be established.

Resolution:

To allow everyone's input to be valued, we compared the pros and cons of each approach and agreed on a balanced style that combined professionalism and creativity, hence ensuring everyone was on board. For example, Yash would create a temporary template for the project and present it to the team. Then, we would discuss potential changes to the design – Seren and Ayush would format the text fonts while Ridwaan would ensure that the picture quality was not affected. With this synergy and seeking team feedback with every step we took, we even managed to complete our assignment early!

➤ Time Management Issues

Explanation:

Our team experienced some time management issues regarding the schedule of online meetings. For example, due to religious commitments, some of us needed to attend prayers. One time, unfortunately, Ridwaan was suffering from fever. Another time, Yash had undergone dental surgery. This created pressure as meetings would lack members, hence Ayush and Seren would have to brainstorm ideas and refine the work by themselves, which can get frustrating. This could often lead to meetings taking longer than expected.

Resolution:

To ensure tasks were always completed within planned deadlines and our meetings were not exhaustingly long, we reassessed our online meeting schedule. Ayush asks each of us about our availability on a particular date, and upon intensive discussion, we then plan our next meeting. If a member happens to be absent, we make sure the absentee is informed about the discussion and works assigned through a text summary in the WhatsApp Group Chat.

Appraise your own reactions to the conflict, your perception of both positive and negative outcomes of the conflict on the team.

Reactions to Conflicts:

Ayush:

- **Conflict:** We had agreed to take a picture with the icon of DeepSeek in the laboratory but eventually we took the photo with Sir Issac Newton.
Reaction: I was surprised initially but then appreciated that they agreed upon my suggestion
- **Conflict:** I was suggesting including the beautiful scenic view of the Port-Louis Moka range in the photo of nature together with some beautiful flowers but in the end we ended up with only a few trees
Reaction: A bit disappointed because it does not exactly represent the true beauty of nature
- **Conflict:** Seren and Yash said: “Saki Ayush dire samême ” translating to “Whatever Ayush says, we go with it”.
Reaction: I know that they were joking with me but my response was by saying no. This is because I did not want to be the only one taking decisions. I wanted to have everyone’s ideas and opinions and from this we decided.
- **Conflict:** I wanted to take a better photo with another car like a Porsche Taycan Turbo S on the following day we had taken a photo with the Mercedes, but some team members didn’t want to because they feared that we might get into trouble.
Reaction: A little regret because I liked the Porsche more than the Mercedes.

Ridwaan:

I dealt with the conflicts in a calm and ethical way. We all agreed on a principle, that is, to agree on what the majority say. The positive outcome is that the best idea and more coherent one has been chosen for our assignment. As for the negative outcomes, there is none.

Makhun:

At first, having the project not turned out the way I wanted, disappointed me. But I then realised how astonishingly incredible the final product becomes when each of our ideas are assembled, even if my personal ideas are discarded. Furthermore, it can get frustrating when the deadline is approaching and the work is yet to be complete. But we always complete our assignments on time, even if we need to have longer meetings. This indeed shows the absolute dedication of our team.

Seren:

I responded to the arising conflicts calmly and with a mediating mind. Maybe sometimes I happened to be frustrated but I learned patience with my teammates.

- **Positive Outcomes:** These ordeals instilled better understanding tactics within me and improved my communication skills.
- **Negative Outcomes:** On the other side of the coin, we had some delays and tension within the group.

Explain your learning outcomes

(What did you achieve and/or learn through these activities)

Ayush:

I learnt that Microsoft 365 can be used as well to work together at the same time on PowerPoint just like with Google slides and Canva.

I came to know more about Ridwaan.

I learnt that AI is now integrated into PowerPoint as well. It can read, understand the context and design templates for the slides. (Designer)

I learnt more about the topic of AI especially on the LLMs and SLMs part.

Working together on the same PowerPoint is faster than having several files and then, one person would have to compile the work of everyone together. I remember that Yash was adjusting the borders while Seren and I were proofreading and writing the descriptions. This is more efficient.

Ridwaan:

These activities helped me to overcome my timidity -- giving me confidence. The oral presentation has put me on track to do presentations, as such, I'll not panic for other presentations. Scavenger hunt made me get to know new people and I become at ease to work with them. I also discovered the online Microsoft 365 where several people can work simultaneously on a document.

Makhun:

- Learnt to edit and work with PowerPoint (an application I previously disliked).
- Gained experience in sharing work across multiple devices simultaneously.
- Strengthened problem-solving skills under time pressure while maintaining patience and emotional control.
- Improved listening skills, which enhanced communication and role clarity.
- Learnt to give constructive criticism without hurting others' feelings.
- Discovered the importance of task-sharing, recognizing that each member brings unique strengths.
- Built stronger bonds with old friends and got to know new ones better.

Seren:

From the Scavenger Hunt came mostly teamwork, quick thinking and creativity. From the Virtual Team Building, the first presentation came mostly adaptability and online participation skills. However, my personal achievements were more or less progress on building confidence, better listening skills and having an idea on leadership.

LESS IS MORE
